eslint-cli

npmv1.1.1downloads18k/monthdependenciesup to date

The local ESLint executor.

Motivation

ESLint recommends that we install ESLint into project-local rather than global.

```
$ npm install --save-dev eslint
```

In that case, there are many merits, but `eslint` CLI command is not available.

```
# This is error:
$ eslint src

# So you have to use:
$ ./node_modules/.bin/eslint src
```

It's inconvenient a bit. This package gives you `eslint` CLI command which runs local installed ESLint.

Installation

Use [npm](#) to install.

```
$ npm install -g eslint-cli
```

Note:

- The `eslint` package must not be installed into global.
- This package must be installed into global.

Usage

First, install the `eslint` package into project-local.

```
$ npm install --save-dev eslint
```

Next, use `eslint` CLI command.

```
$ eslint src
```

The command runs the global-installed `eslint-cli`, then it finds and runs the local-installed `eslint`.

That's all. Enjoy!
